

Creatio Presents Its Major Platform Update, 8.0 Atlas, to Build Applications and Workflows with No-Code and a Maximum Degree of Freedom

The Atlas release includes reimagined no-code capabilities grouped into three major innovations: No-Code Console, Freedom UI, and Composable Approach

Boston, MA – February 8, 2022 – Creatio today unveils Creatio 8.0 Atlas — the evolution of its platform with the next-level tools to empower creators to build enterprise applications and workflows with no-code and a maximum degree of freedom. The update will be available to all Creatio customers today and compatible with previous versions. The release is introducing several innovations including a consolidated No-Code Console, an elevated canvas-style UI designer (Freedom UI), and a composable approach to building applications.

No-Code Console

In the release, Creatio consolidates, simplifies, and significantly extends all application design tools into the unified no-code console, a module where no-code developers can design and launch their applications. The console includes the ability to create and configure new and existing pages, set up data models and access rights, design workflows, and enable no-code integrations using SOAP and REST services. The no-code console also contains the ability to access advanced configuration tools available for professional developers. This facilitates the collaborative development of fusion teams.

Freedom UI

In Atlas 8.0, Creatio launches a completely new framework for UI/UX configuration called the Freedom UI. It empowers no-code developers to design an interface of any type enabling a maximum degree of freedom. The

One Platform.

Freedom.

Genuine Care.

Freedom UI contains a library of predefined views, widgets, and templates to accelerate the design process. The new version allows users to apply different UI themes and styles. The Freedom UI is fully adaptable to different screens and devices and complies with WCAG 2.1 requirements. Additionally, Creatio will be using its powerful AI engine to drive recommendations to no-code developers, suggesting elements and styles for different vertical and horizontal use cases based on a self-learning mechanism.

Composable Approach

Composability is another innovation that will be introduced in the new version. Creatio 8.0 enables no-code developers to use composable elements at each stage of the development process. The different types of composable elements can be accessed directly from the console. The composable no-code development process allows users to assemble applications and reuse components leveraging the “Lego blocks” approach. This also includes the ability to utilize 750+ Creatio Marketplace applications, connectors, and templates, that can be deployed with one click and used in the design process. In the meantime, the release includes enhanced ALM capabilities that provide no-code developers with the ability to view available instances, perform typical deployment operations and orchestrate applications at each stage of the development lifecycle. The ALM portal delivers the possibility to organize the work of different teams (no-code architects, no-code developers, professional developers, etc.), while managing collaborative processes and invitations.

The Atlas 8.0 release is being introduced today during Creatio's special event, Freedom Release. In the first part of the virtual show, attendees have a chance to enjoy a thought-provoking discussion about no-code hosted by the Project Management Institute's Head of Citizen Development and Creatio's key partners and executives. Creatio's CEO and Founder Katherine Kostereva will unveil the company's vision for the future of no-code and key values of the Creatio platform. The core part of the event will unleash all major enhancements and upgrades of Creatio 8.0 Atlas. Finally, for the event's exciting finale, a special guest, Grammy-nominated international DJ Paul van Dyk will perform a special freedom set dedicated to the release. The new version will be available to all users [immediately after the Freedom Release virtual show](#).

About Creatio

Creatio is a global vendor of one platform to automate industry workflows and CRM with no-code and a maximum degree of freedom. Millions of workflows are launched on our platform daily in 100 countries by thousands of clients. Genuine care for our clients and partners is a defining part of Creatio DNA.
